AI FOR INDUSTRY EXCELLENCE

Discover how AI tools can streamline operations across the architectural woodworking ecosystem, from fabrication shops to material suppliers and service providers.

Join us online for a practical demonstration of how AI can enhance businesses throughout the architectural woodworking industry. In this hands-on webinar, we'll explore two leading AI platforms and show you how they can tackle everyday business challenges, whether you're running a custom fabrication shop, managing an estimating team, or supplying materials. You'll learn how these tools can help draft clear company policies that grow with your business, improve operational processes across different industry segments, and simplify Excel calculations for everything from inventory management to production scheduling.

Through live demonstrations, we'll show you how to harness AI to reduce administrative time while maintaining the quality and service that defines our industry. Perfect for everyone from independent craftspeople to suppliers, fabricators, and large-scale manufacturers who want to work smarter. No technical expertise required – just bring your business challenges and an open mind.
